Common Topics and Sample Questions with Answers

Crane Fundamentals and Components

Sample Question:

What is the primary function of a crane's load moment indicator (LMI)?

Sample Answer:

The load moment indicator (LMI) monitors the crane's load weight and the boom's position to prevent overloading and tipping, providing real-time safety alerts to the operator.

Elaboration:

Understanding the LMI's role is essential for safe crane operation. It ensures the crane operates within its rated capacity, reducing the risk of accidents caused by overloading.

Load Capacity and Calculations

Sample Question:

If a crane has a maximum capacity of 20 tons at a 10-foot radius, what is its approximate capacity at a 15-foot radius?

Sample Answer:

The capacity decreases with increasing radius. Using the inverse square law approximation, the capacity at 15 feet is roughly 13.3 tons.

Elaboration:

Operators need to understand how load capacities diminish with increased reach. Familiarity with these calculations helps in planning safe lifts.

Rigging and Lifting Techniques

Sample Question:

What is the purpose of a sling angle in rigging, and what is the recommended maximum angle?

Sample Answer:

The sling angle affects the load's effective weight; the smaller the angle, the higher the force on the sling. The recommended maximum sling angle is typically 60 degrees to minimize sling stress.

Elaboration:

Proper rigging practices prevent sling failure. Studying sling angles and their effects ensures safe lifting operations.

Safety Protocols and OSHA Regulations**Sample Question:**

According to OSHA standards, what is the minimum clearance distance required between a crane load and power lines?

Sample Answer:

OSHA requires a minimum clearance of 10 feet between the crane load and power lines rated up to 50 kV. For lines over 50 kV, additional clearance distances are required.

Elaboration:

Maintaining proper clearance prevents electrocution hazards. Familiarity with OSHA guidelines is critical for compliance and safety.

Scenario-Based Questions**Sample Question:**

During a lift, the crane operator notices a sudden change in wind speed. What is the appropriate action?

Sample Answer:

The operator should immediately stop the lift, secure the load, and assess wind conditions before
