Question What are the main functions of the human immune system as covered in the 3rd edition exam questions? The main functions include defending against pathogens, recognizing and neutralizing foreign substances, and establishing immunological memory to prevent future infections. How do innate and adaptive immunity differ according to the 3rd edition exam questions? Innate immunity provides immediate, nonspecific defense mechanisms, while adaptive immunity develops a specific response over time and retains memory for future protection. What role do lymphocytes play in the immune response as per the 3rd edition exam content? Lymphocytes, including B cells and T cells, are crucial for adaptive immunity; B cells produce antibodies, and T cells coordinate the immune response and kill infected cells. Which immune cells are involved in the inflammatory response according to the 3rd edition exam questions? Cells such as macrophages, neutrophils, mast cells, and cytokines coordinate the inflammatory response to infection or injury. What is the significance of antibodies in immune defense based on the 3rd edition exam questions? Antibodies, produced by B cells, identify and neutralize pathogens, facilitating their removal and preventing infection. How does the 3rd edition exam explain autoimmune diseases? Autoimmune diseases occur when the immune system mistakenly attacks the body's own tissues due to a loss of self-tolerance, leading to chronic inflammation and tissue damage. What are vaccines, and how are they discussed in the 3rd edition exam questions related to immunity? Vaccines are preparations that stimulate the immune system to develop adaptive immunity against specific pathogens, providing long-term protection. Describe the concept of immune tolerance as outlined in the 3rd edition exam questions. Immune tolerance is the immune system's ability to distinguish self from non-self, preventing autoimmune reactions by avoiding attack on the body's own tissues. What are the common mechanisms of immune evasion by pathogens as discussed in the 3rd edition exam content? Pathogens evade the immune system through strategies such as antigenic variation, inhibiting antigen presentation, secreting immune-suppressive factors, and hiding within host cells.
