Sample Practice Question and Solution

Question:

A random sample of 50 students at a university found that 30 of them prefer online classes over in-person classes. Construct a 95% confidence interval for the proportion of all students who prefer online classes. Interpret your interval.

Solution:

- Identify sample proportion ($p?$):

$$p? = 30/50 = 0.6$$

- Calculate standard error (SE):

$$SE = \sqrt{p?(1 - p?)/n} = \sqrt{0.6 \cdot 0.4 / 50} = \sqrt{0.24 / 50} = \sqrt{0.0048} = 0.0693$$

- Find the z-value for 95% confidence:

$$z \approx 1.96$$

- Calculate the margin of error (ME):

$$ME = z \cdot SE = 1.96 \cdot 0.0693 \approx 0.136$$

- Construct the confidence interval:

$$\text{Lower bound} = p - ME = 0.6 - 0.136 = 0.464$$

$$\text{Upper bound} = p + ME = 0.6 + 0.136 = 0.736$$

Result: The 95% confidence interval for the proportion of students who prefer online classes is approximately (0.464, 0.736).

Interpretation:

We are 95% confident that between 46.4% and 73.6% of all students at the university prefer online classes over in-person classes.
