Key Characteristics of a Point:

- Has no length, width, or height
- Used to specify a location
- Denoted by a capital letter

Example:

- Point A is located at a specific position on a coordinate plane.

What is a Line?

A line is a one-dimensional figure that extends infinitely in both directions. It is straight and has no thickness or width. In diagrams, lines are often represented with two arrowheads to indicate their infinite nature.

Key Characteristics of a Line:

- Infinite in both directions
- Made up of infinitely many points
- Usually named by two points on the line (e.g., AB) or by a lowercase script letter (e.g., l)

Example:

- Line AB passes through points A and B and extends endlessly beyond both.

What is a Plane?

A plane is a flat, two-dimensional surface that extends infinitely in all directions. It has length and width but no thickness. Planes are often visualized as flat sheets of paper extending infinitely.

Key Characteristics of a Plane:

- Infinite in all directions
- Contains infinitely many points and lines
- Named by three non-collinear points (points not all on the same line) or by a capital letter (e.g., Plane P)

Example:

- Plane XYZ contains points X, Y, and Z, which are not all on the same straight line.

Core Concepts and Definitions

Collinearity

- Points are collinear if they lie on the same straight line.
