- Solution:

$$KE = (1/2) m v^2$$

$$KE = (1/2) 1500 \text{ kg } (20 \text{ m/s})^2$$

$$KE = 0.5 1500 400$$

Detailed Explanations of Sample Questions and Answers

Question 1: What is the primary difference between heat and temperature?

Answer: Heat is the transfer of thermal energy between systems due to a temperature difference, whereas temperature measures the average kinetic energy of particles within a substance. The answer key emphasizes that heat involves energy in transit, while temperature is a property of the matter itself.

Analysis: Recognizing this distinction helps students correctly interpret problems involving thermal energy transfer and avoid misconceptions.

Question 2: Describe how heat is transferred through conduction. Provide an example.

Answer: Conduction occurs when particles collide and transfer kinetic energy, passing heat from the hotter part to the cooler part of a material. An example is a metal spoon heating up in a hot soup, where heat travels along the spoon via particle collisions.

Analysis: The key underscores that materials differ in their conductive properties; metals are good conductors, plastics are poor conductors.

Question 3: Explain the significance of the Second Law of Thermodynamics.

Answer: The Second Law states that natural processes tend to increase entropy, leading to the spontaneous flow of heat from hot to cold objects. It explains why perpetual motion machines are impossible and underpins the irreversibility of many processes.

Analysis: This law is fundamental in understanding energy efficiency and the limits of energy conversion systems.

Question 4: Using Boyle's Law, how does pressure of a gas change when its volume decreases at

constant temperature?

Answer: According to Boyle's Law, pressure is inversely proportional to volume at constant temperature. Therefore, decreasing the volume increases the pressure proportionally.

Mathematically: $(P_1 V_1 = P_2 V_2)$

Analysis: This relationship is crucial in applications like syringe operation and weather phenomena.
